CAMERA INFO

Camera: -0.941, 10.803, 17.981

Target: 0.000, 0.000, 0.000

Right Click:

Copy Camera Data

Save to JSON File

Navigation icons: Rotate, Pan, Dolly, etc.

Vertical toolbar with icons for various camera and scene controls.

Timeline navigation controls: First, Previous, Play, Next, Last, Zoom in, Zoom out, Fit.

Timeline axis with frame numbers from 0 to 348. Frame 87 is highlighted.

SPLAT DATA First Last Zoom out In Fit or use Ctrl-mouse wheel over the numbers

CAMERA POSES

Buttons: Refresh, Clear All, Sort by Frame, Copy to Last, Mode: Circular, 1000, Record, 720, Stretch Poses, Read, Update, Export Camera, Export CSV, Z-up -> Y-up, Invert Y, Blender->SS, Reset Coords

Frame 180 - camera_2

Copy

Position: 20 15 0

Target: 0 0 0

FOV: 65 *

Pose Editor

Frame 270 - camera_4

Copy

Position: 0 15 -20

Target: 0 0 0

FOV: 30 *

SOR = Preview or cleanup or select or separate

Camera Pose tools : Import / Export
Json Files

Camera Pose tools : Record at set interval while you move the view

Camera Pose tools : Stretch to number of frames

Camera Pose tools : Mode = spline / Circular
(tries to fit a circle through the points (currently
over sizes it though).

Camera Pose tools : read from / Up-
date to - using an inbuilt editor. This
also has a copy and a delete

Camera Pose tools : select a frame & Copy to last

Camera Pose tools : Z-up -> Y-Up Invert Y : I put in to do conversions as I was getting
my ups & downs wrong (*I'm from AutoCAD where Z is UP*)

V = Vis tools setting and add to time-line as keyframes

Vis tools using python creator tool

S = Splat Size (current min is 0.1 - but I think it should go down to 0.01)

Z = measure/scale

Clean Screen O (note this now conflicts with the Flood select

A = measure areas - Can also export to TXT file

Perfect! Now it works like this:

1. Click "Select Folder" - Opens a folder picker

2. Automatically detects cubemap images based on common naming patterns:

- Right: `right, posx, px, pos-x, +x`
- Left: `left, negx, nx, neg-x, -x`
- Top: `top, up, posy, py, pos-y, +y`
- Bottom: `bottom, down, negy, ny, neg-y, -y`
- Front: `front, forward, posz, pz, pos-z, +z`
- Back: `back, backward, negz, nz, neg-z, -z`

3. Shows status as it finds and loads images

4. Automatically applies the skybox when all 6 faces are found

Example folder structure:

```
skybox/
├── skybox_right.jpg
├── skybox_left.jpg
├── skybox_top.jpg
├── skybox_bottom.jpg
├── skybox_front.jpg
└── skybox_back.jpg
```
